

BUG BOUNTY

Managed Bug Bounty

Proactively reduce risk by finding more hidden vulnerabilities

Summary

In an elevated threat environment where new vulnerabilities are constantly emerging (per research, 80% of hackers routinely encounter vulnerabilities they've never seen before), organizations that rely only on traditional cybersecurity methods risk being blindsided by cyber attacks. What's needed instead are innovative, proactive alternatives that anticipate the attacker mindset and take advantage of human ingenuity at scale to find hidden vulnerabilities in your attack surface before adversaries do.

Managed Bug Bounty solutions on the Bugcrowd Security Knowledge Platform™ level the playing field by combining data, technology, and human intelligence to continuously find more critical vulnerabilities in your attack surface than other approaches. This incentivized testing approach taps into the power of the global security researcher community (the Crowd), and complements it with automated workflows and contextual insights from a rich security knowledge graph based on thousands of customer solutions to find critical vulnerabilities continuously and help you fix them, fast.

Fully Managed Solution, From End to End

Bugcrowd provides fully managed programs for coverage of the most important attack targets: web and API interfaces on cloud/server, mobile, and IoT platforms. From scoping to Crowd activation to triage to SDLC integration, we have your back at every step:

- **Determine Scope and Rewards:** We'll help you create and continually adjust the parameters (on demand/continuous, public/private, bounty levels, etc.) that meet your security testing goals.
- **Activate the Right Team:** Our CrowdMatch™ ML technology precisely matches the right trusted researchers to your needs and environment across hundreds of dimensions for best results.
- **Rapidly Validate and Triage:** Our global team of specialists quickly dedupes, reproduces, and prioritizes submissions at any scale and provides remediation guidance, with 99%+ SLA achievement. Unlike competitors, critical issues are usually handled within hours.
- **Integrate and Remediate:** The platform integrates with your existing dev and security processes via connectors, webhooks, and rich APIs to ensure that issues are remediated well before products ship.

Key Points of Value

Instant impact on risk and security posture

A team of skilled, trusted researchers precisely matched to your needs continuously find hidden vulnerabilities that other approaches miss.

Proven security ROI

A results-driven model ensures you pay only for vulnerabilities that present a risk and not the time or effort it took to find them.

Low operational overhead

Our platform-powered, managed solution seamlessly integrates with your development and security business processes, delivering frictionless setup.

Many customers complement this solution with Pen Testing as a Service, Vulnerability Disclosure, and Attack Surface Management. With Bugcrowd, you can get them all on a common, multi-service platform with a unified experience.
