

CrowdMatchTM

The Right Crowd at the Right Time

Precise matching and activation of trusted, qualified researchers for your cybersecurity needs

Discover more critical issues and remediate them faster with proprietary machine-learning technology in the Bugcrowd Security Knowledge PlatformTM

At Bugcrowd, our mission is to help customers reduce cybersecurity risk and improve security ROI by bringing the collective power of the global security research community (“the Crowd”) to all your workflows, including Pen Testing as a Service, Attack Surface Management, Vulnerability Disclosure, and Managed Bug Bounty. At the same time, we’re committed to giving the ethical hacker community more lucrative, interesting options for using their skills than any other crowdsourced security provider.

To help do that, CrowdMatchTM technology in the Bugcrowd Platform enables real-time, auto-curation of crowds based on a rich knowledge graph developed over a decade, matching researcher profiles to your needs across hundreds of dimensions. In contrast, coarse-grained approaches yield poor results because unqualified, unmotivated researchers can end up working on your program. Compared to such methods, CrowdMatchTM enables:

70% More valid vulnerabilities

104% More P1s/P2s/P3s

82% Higher payouts

Only Bugcrowd provides:

Precise, real-time matching of the right trusted researchers to your needs and environment

Deeper and more thorough review by qualified and motivated researcher

Integrated Validation & Triage services with global presence to help you focus on what’s important—fast

Prioritization based on a battle-tested, community-driven Vulnerability Rating Taxonomy (VRT)

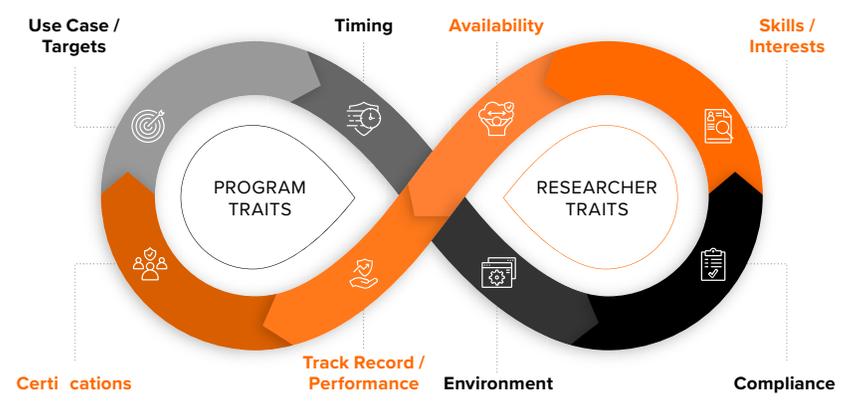

Real-time visibility into researcher interactions and results

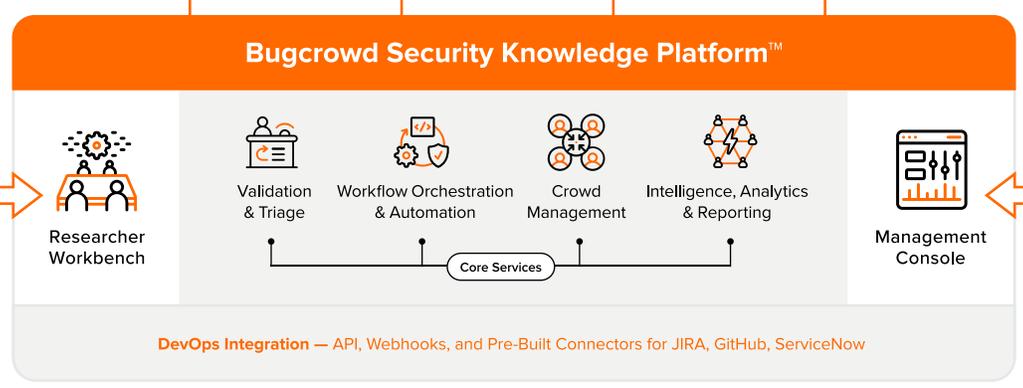

How It Works

CrowdMatch™

Based on a rich security knowledge graph in the Bugcrowd Security Knowledge Platform™ containing data about use cases, environments, and researcher traits developed over a decade of experience, CrowdMatch™ automatically recommends precisely the right trusted security researchers for your needs.

Platform Overview

Best Security ROI from The Crowd

We match you with the right trusted security researchers for your needs and environment across hundreds of dimensions using ML

Instant Focus on Critical Issues

Working as an extension of the platform, our global security engineer team rapidly validates and triages submissions, with P1s often handled within hours

Contextual Intelligence for Best Results

We apply accumulated knowledge from over a decade of experience across 1000s of customer solutions to your goals for better outcomes

Continuous, Resilient Security for DevOps

The platform integrates workflows with your existing tools and processes to ensure that applications and APIs are continuously tested before they ship
